

Hengborann MOUL

Senior Software Engineer, Data Engineering & Visualization

✉ moulhengborann@gmail.com ☎ 011836711 GitHub: @hengborann-moul
LinkedIn: Hengborann MOUL Location: Phnom Penh, Cambodia

Highly skilled **Software Engineer and Data Specialist** offering **6+ years** of experience in delivering **robust, scalable solutions** across diverse industries, including **Telecommunications, EdTech, and SaaS**. Core technical competencies include **Python, TypeScript, Angular, and React**, underpinned by expertise in **Machine Learning, system architecture, and modern data workflow design**. Currently pursuing an **M.Sc. in Data Science** to specialize further in **AI Software Engineering, Data Engineering, and Machine Learning**.

Experiences

Data Engineering & Visualization

CamGSM Co. Ltd (Cellcard)

Period: May 2025 – Jan 2026 **Location:** Onsite – Phnom Penh

+ Leadership & Strategic Impact

- Led the **end-to-end strategy and delivery** of a company-wide **ETL/ELT data pipeline modernization** initiative, aligning engineering priorities with annual business planning objectives and reducing **data-to-report latency** by streamlining source-to-BI workflows.
- Served as the **technical lead** for **Customer Value Management analytics**, translating business requirements into actionable **data architectures** and directing campaign design, execution, and post-campaign performance evaluation cycles.
- Defined the **roadmap** and championed the adoption of the **Model Context Protocol (MCP)**, enabling the team to build an **Agentic Chatbot** that delivers accurate, real-time query responses from an internal mini data warehouse.

+ Technical Delivery

- Designed and implemented a **fully automated ETL/ELT pipeline** that reliably moves data from multiple source systems to **Power BI**, enabling scalable, self-service BI reporting.
- Applied **Machine Learning clustering models** to segment the customer base by usage patterns, delivering **personalized marketing insights** that directly increased product adoption metrics.

Senior Software Engineer

Spiral PBKH Co., Ltd.

Period: November 2018 – April 2025 (6.5 years) **Location:** Onsite – Phnom Penh

+ Technical Leadership & Architecture Ownership

- Owned the **architecture and delivery** of a scalable, enterprise-grade **Data Platform UI**, enabling end-to-end **data governance**, administration, and monitoring workflows — coordinating requirements across product, design, and backend teams.
- Led the design and deployment of a **Kong API Gateway** layer as a centralized middleware solution, setting standards for **authentication enforcement**, request governance, and **cross-service scalability** across a distributed microservices ecosystem.
- Established and enforced **automated CI/CD pipeline standards** across the engineering team, reducing **release cycle times**, decreasing production incidents, and building team confidence in continuous delivery practices.

+ People Leadership & Mentorship

Objective

Seeking to advance my skills and build a strong career with a company that values innovation and creativity, and see the benefit of AI Integration.

Education

Institute of Technology of Cambodia
Phnom Penh, Cambodia

M.Sc in Master of Engineering in Data Science

Kirirom Institute of Technology

Kampong Speu, Cambodia

B.Sc in Software Engineering

Technical Expertise

Python	
Angular	
React	
TypeScript	
JavaScript	
Machine Learning	
Plotly	
Rust	
Java	
Spring Boot	
SQL	
Power BI	
Microsoft Fabric	

Skills/Exposure

Python • JavaScript • TypeScript • Angular • React • SCSS • Node.js • Express • PHP • Laravel • Java • Spring • Spring-boot • Spring-web-flow • MongoDB • AWS • Docker • Git • SQL • Keras • TensorFlow • PyTorch • Power BI • R

- Drove a **team-wide migration** from legacy authentication systems to **modern identity management standards**, leading planning, execution, and stakeholder communication — significantly improving **security posture** and developer UX.
- Championed **engineering best practices** through rigorous **peer code reviews**, proactively identifying improvements in security, performance, and clean architecture — fostering a **culture of quality** and continuous improvement.
- Led **cross-team collaboration** to deliver a scalable **HR Management System (HRMS)**, coordinating requirements and delivery across local and **offshore teams in Japan**.

+ Strategic & Cross-Functional Projects

- Designed and delivered **interactive BI dashboards** enabling **data-driven decision-making** across business stakeholders — translating complex datasets into clear, **actionable visual insights**.
- Architected and shipped scalable **RESTful APIs** within a **Java/Spring Boot microservice architecture**, implementing custom middleware plugins for **granular access control** and security hardening.
- Led the **full-stack engineering** of enterprise **Angular + TypeScript** frontend platforms, establishing **modular architecture** and type-safe development standards adopted across multiple products.

Methodology/Approach

Lean • Kanban • Design Thinking • Test-Driven Development • Pair Programming

Tools

Git • GitHub • Gitlab • Slack • Postman
• Jupyter • Vim • Neovim • Gemini-CLI • Claude-CLI

Certifications

Microsoft Data Visualization

Completed the program, focus on builds expertise in Power BI.

IBM Data Engineering Professional Certificate

On-going 80% completed, focus on builds expertise in Data Engineering, Big Data, building Data Pipeline and Data Platform.
